

Hello all,

Sorry I missed your phone call, Cindy. I think I worked out what we initially had in mind for the sediments and have made revisions to the language in Sections F (see last paragraph) and Section H.4 (removed what was confusing me). I still think there may be room for improvement in the descriptions - but we should discuss any questions you have. I will be in the office all next week.

The revised document is attached. You can keep track of the revisions by looking at the file name and date in the footer. We should be looking at filename\_4, dated 03/31/00.

I am using this version to finish my cost estimates for the canneries. It's not your problem, but the budget cycle for StarKist starts in May - so if the permit gets issued this fall then they need to budget for the first set of studies now. COS budget cycle starts in the fall so its not as urgent for them. Anyway, this is why I am trying to nail down the stations and parameters reasonably well.

Regards,

Steve
